

Finial Care and Installation

Please read and follow all manufacturers' recommendations for finial installation and care **BEFORE** installing any products.

ALL FINIALS MUST HAVE A PROPER SEALER AND/OR PAINT APPLIED TO PREVENT CRACKING.

Preparation:

All wood post cap finials are constructed of laminated clear, Redwood and Western Red Cedar. They should be sealed **BEFORE** installation with an oil base primer, paint, stain, or preservative to ensure long life and years of enjoyment.

Installation:

Finials are pre-drilled and are shipped with lag screws for easy installation after sealing. The screws should be inserted **FIRST** into the base of the wood finial using a pair of pliers around the smooth section (not the threads). Then thread the finial with mounted lag screw into the wood post. Pre-drilling the top is optional and may aid in the installation. Exterior caulking material can be applied to the base to ensure a tight fit if desired.
